

Mini-Application Services ►► Overview

Overview:

It is not uncommon for companies to have multiple applications built on Microsoft Excel, Microsoft Access and/or FileMaker - and why not, these applications are fairly easy for end users and fairly easy to build in a short amount of time.

The challenge with desktop database driven applications (i.e. Microsoft Access) is that over time, they become fragmented, vulnerable to use of sensitive information and are simply not web friendly.

Asparian's Application Consultants design, build and implement applications to support business initiatives in the most cost-effective manner, on time and on budget. Over 90% of our Mini-Application Engagements are completed in 40 to 160 hours.

Asparian uses industry-standard methodologies to execute application solutions that match your business requirements. Our consultants leverage strong project management, adhere to a time-tested application development processes and utilize internal resources to ensure proper deployment.

Are you in Need of a Custom Mini-Application?

- End users are using Excel Spreadsheets for Reporting and Forecasting?
- Mission critical data is being stored in a Desktop Applications?
- There is a need to take information Web Based?
- Resources do not have the time to build the Applications users are requesting?
- Sharing data and Security are concerns for current Business Processes?
- Current Application processes are time intensive to pull data (i.e. using Excel)?
- Maintenance of the Application is an inefficient use of IT resources?

Asparian assists companies in taking Home Grown, Custom and Departmental Business Process Applications Web based ensuring each project maintains Security, Integrity, Scalability, Availability and Portability.

Our Applications can be Stand Alone Applications and are bundled with the option to take the Application Web Based in little time. Once deployed, the applications we build require little or no maintenance, can integrate with legacy systems and provide the flexibility to cost effectively add enhancements at a future date.

Our Most Requested Web Based Features

Reporting & Charting:

The ability to generate HTML Reports that display results of SQL Queries and the ability to create HTML, SVG or Flash template all with customizable capabilities.
