

Microsoft Services ▶ ▶ Overview

Overview:

Asparian offers a full-service, integrated approach to helping our clients achieve success. The success of our Microsoft Support is built around a methodology in which every client engagement is executed seamlessly from planning, application launch to on going Microsoft Monthly Managed Service Support.

Asparian's Microsoft Consultants assist enterprises in planning, deploying and supporting implementations of Microsoft Technologies such as Microsoft Active Directory, Microsoft Exchange Server, Systems Management Server and SQL Server.

Asparian's Consultants deliver Microsoft Services for the entire family of Microsoft .NET Enterprise Servers and Windows Server. Asparian implements migrations, integration, updates and support services including on-site and remote monthly support, packaged application development, custom applications development, performance tuning, database administration, training and education.

We have a mature and sound practice that delivers Microsoft Service Solutions around the complete Microsoft Technology Suite.

Key Microsoft Technology Services:

Monthly Managed Support:

Leveraging both in-house expertise and industry alliances, Asparian provides:

- *Remote Managed Services*
Using custom scripts, Microsoft's Management System and outsourced Management Systems, Asparian provides complete remote managed services customized to scale with 24/7/365 availability.
- *On-Site Managed Services*
Includes Remote Managed Services and entails professional services of applications, middle-tier and databases.

Professional Services:

- *Applications (Custom and Packaged)*
Using industry-standard methodologies, our Applications Group designs, builds and implements packaged/custom applications to support business initiatives in the most cost-effective manner, on time and on budget.
- *Middle-Tier*
We define strategies and implement innovative ways to build businesses by combining our expertise in database, development tools, application servers and collaboration suites. Our development methodology focuses on line-of-business analysis, capturing requirements and understanding how users interact with applications through the web and via client interfaces.
- *Databases*
Asparian provides troubleshooting, tuning, optimizing and the on-going maintenance of Microsoft SQL Databases.

Training & Education:

Training and Education Service offerings can be certified or independent, onsite, at remote location or via the web depending on your organization's requirements.

Technology Fulfillment:

Asparian provides the knowledge needed to cut licensing costs of disparate purchases, eliminate untimely pricing information, expedite the procurement process, increase productivity and designate single-point accountability.

About Us: Asparian, LLC is a technology focused, business driven consulting and technology services firm. While encompassing multi-industry expertise and best practice business process knowledge, Asparian provides trusted insight into existing and emerging technologies while identifying new business and technology trends supporting organizations to sustain long-term success.

Microsoft ► ► Product Overview

Application Center

Microsoft Application Center is Microsoft's deployment and management tool for high-availability Web applications built on Microsoft Windows 2000. Application Center simplifies managing servers groups as simple as managing a single computer.

BizTalk Server

Microsoft BizTalk Server enables companies to rapidly build and deploy integrated business processes within an organization and with partners. BizTalk Server offers a suite of tools and services that make building business processes and integrating applications faster.

Commerce Server

Microsoft Commerce Server offers users a less complicated and less time-consuming way to build tailored, effective e-commerce solutions. By providing the application framework, together with feedback mechanisms and analytical capabilities, companies can quickly develop sites that optimize the customer experience, encouraging repeat business and forging tighter partner relationships.

Content Management Server

Microsoft Content Management Server dramatically reduces the time required to build and deploy content-driven Web sites that deliver high scalability, reliability and performance. Content Management Server empowers content providers to manage their own content and provides site users with a targeted and personalized experience tailored to their profile and browsing device.

Microsoft Exchange Server

Microsoft Exchange Server delivers a reliable, scalable and manageable infrastructure with 24x7 messaging and collaboration and low cost of ownership. It supports a wide range of collaborative activities, including group scheduling capabilities, discussion groups and team folders and it provides access to information across geographic, organizational and technology barriers with features such as Instant Messaging, real-time data and video conferencing.

Host Integration Server

Microsoft Host Integration Server extends Windows to other systems by providing application, data and network integration. Host Integration Server lets companies quickly adapt to new business opportunities while preserving existing infrastructure investments.

Internet Information Services

Internet Information Services (IIS) 6.0 is a Web server that provides a highly reliable, manageable and scalable Web application infrastructure for all versions of Windows Server 2003. IIS helps organizations increase Web site and application availability while lowering system administration costs.

ISA Server

Microsoft Internet Security and Acceleration (ISA) Server 2004/2006 is the advanced application-layer firewall, virtual private network (VPN) and Web cache solution that enhances network performance and helps protect organizations of all sizes from attack by both external and internal threats.

Microsoft Operations Manager

Microsoft Operations Manager delivers enterprise-class solutions for operations management of Windows 2000 Server, the Microsoft Active Directory service and other component services, as well as other Microsoft .NET Enterprise Server applications such as Exchange and SQL Server.

Microsoft Project Server

Microsoft Project Server provides an extensible technology platform to securely develop and deploy best practices for project management across the organization.

Mobile Information Server

Microsoft Mobile Information Server is the application server that extends the reach of Microsoft .NET Enterprise Servers, enterprise data and intranet content into the realm of the mobile user. It brings the corporate intranet of mobile devices, providing users can securely access their email, contacts, calendar, tasks, or any intranet line-of-business application in real time.

SharePoint Portal Server

Microsoft SharePoint Portal Server uses the power of Microsoft's search technologies to create an intranet site allowing companies to easily access key content from a broader set of enterprise information.

Small Business Server

Microsoft Small Business Server is a cost-effective network solution that includes core .NET servers and other software for businesses with up to 50 computers.

Microsoft Windows Server

Microsoft's Windows Server operating system provides a dependable, enterprise-ready computing environment. These new features take the next step forward in building on the core of reliability, availability, scalability and security introduced in Windows 2000 Server.
