

Virtualization >> Overview

Overview:

Today's corporations rely on a wide range of enterprise applications supporting complex business processes to maintain business operations and to generate revenues. These applications are typically installed and supported on multiple devices from different vendors, requiring individual sets of management tools and resources.

Because these devices cannot be centrally managed and cannot share storage resources, these heterogeneous environments result in ineffective resource utilization and increased administrative burden.

Asparian's Virtualization Services assist companies in implementing Virtualization Applications that enables multi-vendor technologies to increase storage availability, performance and reliability while reducing technically inherited challenges.

With Asparian's Virtualization Services, companies can deliver storage as a utility by enabling efficient utilization and management of all storage resources across the enterprise.

Our certified engineers can help you overcome the physical limitations of disparate, distributed storage by transforming the individual physical devices into a single, logical storage resource providing the management of all available storage in a single pool from which capacity can be assigned, reallocated, or added based on need.

Asparian understands the benefits of Virtualization principles and we understand no two customers are the same. Our engineers demonstrate a combination of Information Lifecycle Management (ILM), Business Continuity Institute (BCI) and Disaster Recovery Institute International (DRII) methodologies providing a process and practice you can trust.

Key Methodologies

- Information Lifecycle Management (ILM)
- Business Continuity Institute (BCI)
- Disaster Recovery Institute International (DRII)

Asparian provides complete end-to-end storage solutions for most data technology requirements. Through our partnerships and in-house expertise, our services and products for data storage, deployment, management and security protection provide the value required to organizations seeking to maintain growth and operational efficiency.

About Us: Asparian, LLC is a technology focused, business driven consulting and technology services firm. While encompassing multi-industry expertise and best practice business process knowledge, Asparian provides trusted insight into existing and emerging technologies while identifying new business and technology trends supporting organizations to sustain long-term success.

>> Key Features:

- Data Protection
- Management & Tuning
- Remote Copy
- Data Movement
- Data Center Relocation and Consolidation
- Configuration Management

>> Key Benefits:

- Increase Utilization
- Improve Availability
- Automate Management
- Multi-Vendor Allocation
- Increase Storage Resources
- Visual Storage Control
- Maintain Storage Consumption
- Eliminate Server Outages
- Reduce Application Downtime
- Reduce Unused Space
- Leverage Existing Resources
- Increase Investment Protection
- Increase Data Availability
- Improve Service Levels
- Decrease Administration Burden

>> Key Methodologies:

- Information Lifecycle Management
- Business Continuity Institute
- DRI International
