

IT Staffing & Augmentation Services ►► Overview

Overview:

Technology is the cornerstone to every decision an organization makes, from the markets they enter - to the systems they deploy - to the skills they require of their people. In today's Technology labor market, it is difficult to find and retain the right talent for both standardized and specialized positions.

With in depth industry expertise and proven experience in consulting, outsourcing and technology, we quickly deploy the right people, skills sets, alliances, tools and technologies to quickly improve our clients' business performance.

As a multi-focused Technology Consulting firm, Asparian, LLC understands the complexities of locating, qualifying, attracting, negotiating and retaining qualified Technology Personnel, whether it's contract, contract-to-hire or direct-hire.

Companies are looking for more than a recruitment specialist, whom merely enlist bodies for a particular need. Companies need a partner whom they can trust, who understands the total solution and who can ensure their best interest is accounted for.

Asparian is that partner. Our Technology Business Advisors get it right - the first time.

Asparian delivers a comprehensive approach to Staffing and Augmentation that moves our clients forward at every level of their business providing immediate value that is long-term. Our consultants focus on bringing both business and technology skills together, ensuring bottom-line results to our clients.

Technology Staffing & Augmentation Options

Contract

Contract positions can last one day, one month, one year or indefinitely. Clients pay only for the technical contractor hours worked. Clients receive weekly invoices itemized for project cost accounting. When the work is complete, clients can assign our contractors to new projects or request additional personnel for continuing engagements.

With contract positions, our clients control the costs - paying only for the expertise needed while receiving the specialized skills without the investment in training.

Contract-To-Hire

Contract-to-hire positions are excellent to evaluate job performance before making a hiring decision ensuring the right people talent is in place. Contract-to-hire is budget friendly requiring no up-front costs and provides the ability to convert contract Engineers and/or Consultants to your payroll.

Direct-Hire

Direct-hire positions offer the flexibility of fee-contingent staffing by the same people who understand your personnel and business needs. Because of the nature of our Consulting Services, we are adept to attracting the most in-demand technical professionals for your full-time positions.

Contract vs. Permanent

Contract Positions

- Streamline Human Resources eliminating the processes of pre-screening, hiring, training and providing benefits.
- Reduces the costs of procurement of new employees, as well as the costs of testing and screening.
- Provides costs savings related to payroll processing and benefits administration
- Provides specialized employees for difficult-to-fill positions.
- Fulfills temporary labor needs and satisfies short-term projects.

Permanent Positions

- The employee may fill a repetitive day-to-day operation that is not cost justified through contracting.
- The employee may need to have authoritative security rights or privileges.
- The position requires a managerial role with authority to make decisions about a group or team on a long-term basis.

Placing great people in the right positions is the key to achieving outstanding business results. Asparian understands market trends and emerging specialties in information technology and apply the best human and technological resources to locate the right people, on time and within our clients' means.
